## Summary

- Customer-focused Senior Application Developer with more than a decade of experience designing and implementing complex applications across diverse industries.
- Proficient in full-stack development with a primary focus on backend technologies (80% backend/20% frontend.) Instrumental in achieving team goals by leveraging broad expertise to create robust solutions, delivering outstanding results.
- Consistently delivered effective features on time and within budget, maintaining a 100% remote work environment.

## Professional Experience

Known for a commitment to diligence, encouraging success across various companies.

### Senior Application Developer

REDspace | Bedford, NS, Canada | 2014 - Present

- Contracted primarily to perform custom application development for several departments within large, global technology clients.
- Alert to improvement opportunities to control complexity, increase performance, and reduce maintenance and support costs.
- Exemplified versatility by enthusiastically acquiring new skills, adapting to meet dynamic project needs, and exceeding client expectations.
- Mentored junior developers, fostered skill growth, and promoted a collaborative work environment.

### Product Developer

Sherpa Software | Bridgeville, PA | 2007 - 2014

- Provided effective, rapid, and precise application development.
- Consistently delivered high value to the company and its customers.
- Regularly called upon to devise key and innovative components for new and existing products.
- Offered significant, collaborative contributions to the entire development team.

## Expertise

A life-long learner, who strives to acquire and apply new skills and tools—both professionally and personally.

## Projects

Applied expanding skillset to many successful projects.

### Digital Learning Guide (DLG)

- Core developer for a globally-delivered learning content system, including content management features for Instructional Designers and Program Owners and a Reviewer Dashboard to configure teams, perform assessments, and access reports.
- Included several system integration points for input from and output to other systems.
- A global sales training program using DLG achieved an NPS score of 70 and experienced a learning gain of 92%.

### Advisor

- Migrated a critical learning management system, serving 80K globally-dispersed employees, from Domino to Node.js, Express, and MongoDB.
- Created a cron-style task manager for efficient, two-way data integration with other systems.

### Compliance Attender

- Product Manager and Software Developer for a real-time interception, evaluation, and management of Domino email, including deep integration with the Domino server using low-level C API.
- Effective product for customers seeking enhanced journaling, data-leakage prevention, acceptable use enforcement, hostile workplace investigations, litigation discovery, and other similar needs.
